COSMETIC / CLINICAL INDICATIONS

- LYPOLOCALIZE
- Sterile solution elaborated with pure phosphatidylcholine and deoxycholate, this combination favors the dissolution of localized fat in the process of lipolysis. It is ideal to be used for molding the volume of body contouring specially in the abdominal area, thighs, buttocks, and waist.
- Phosphatidylcholine 5%: Is a safe alternative to surgical liposuction and cellulite reduction. It works by breaking the bonds between the fat cells (adipocytes), dissolving fat and to be eliminated later. Specific areas to treat are: arms, abdomen, hips, thighs, and chin.
- Deoxycholate 5%: Has a dual action when contacted with the fat; firstly it breaks the cell wall adipocyte (fat cell); and then exerts a detergent effect emulsifying its content, causing the elimination of the fatty tissue in the treated area.

REGULATORY & QUALITY GOVERNANCE

Status: APPROVED (2026-11-26) | Reviewer: Etternity Dermal, S.L. · Technical Direction
